SUMMARY

Software Developer at Bamboostan, building and maintaining production e-commerce websites, a mobile app and an AI-powered order-confirmation calling bot. Shipped full-stack and mobile projects with **Python, Flutter, React, Node.js and FastAPI**, integrating **Google Gemini** LLM features into real products. B.Tech in Computer Engineering (2026), certified in Python, SQL and Machine Learning.

EXPERIENCE

Software Developer | Bamboostan, Mumbai — Oct 2025 – Present

- Built and maintain the Bamboostan e-commerce website and mobile app end to end, shipping new features to match changing business requirements and keeping the storefront reliable.
- Developed and maintain the Bambro website across frontend and backend, handling feature work, bug fixes and ongoing updates.
- Built an AI-powered cash-on-delivery (COD) calling bot in Python that calls customers automatically to confirm orders before dispatch, reducing manual calling work.

PROJECTS

PrepPulse AI – AI Interview Readiness Platform — Live App | GitHub

Tech: React 19, Node.js, Express, MongoDB Atlas, Google Gemini, Puppeteer, JWT

- Built a full-stack platform that reads a job description and a resume (PDF or text) and uses Google Gemini with Zod-validated structured output to generate a personalised preparation roadmap.
- Added an AI mock-interview coach that scores answers 0–100 with strengths and growth areas, plus a skill-gap matrix ranked by severity.
- Generated ATS-tailored resumes as downloadable PDFs through a headless Puppeteer pipeline.
- Secured the REST API with JWT in HTTP-only cookies, bcrypt hashing and token blacklisting on logout; deployed the frontend on Vercel and the API on Render.

FitFuel – AI Calorie and Fitness Tracker — GitHub

Tech: Flutter, Dart, FastAPI, Python, Google Gemini

- Built a cross-platform Flutter app for Indian diets where users photograph a meal and get editable, AI-identified food items logged to their diary.
- Wrote a FastAPI backend that calls Gemini for photo scanning, text logging and an AI coach, keeping the API key off the device.
- Calculated personalised calorie and macro targets (Mifflin-St Jeor) and workout burn (MET), with weight trends, 7-day charts and streaks.
- Managed state with ChangeNotifier, stored data locally, and unit-tested target calculations and JSON models.

Health Insurance Cost Predictor — GitHub

Tech: Python, scikit-learn, XGBoost, Pandas, Streamlit

- Built an ML app (Codebasics ML course project) that predicts insurance premiums from age, income, BMI, smoking status and medical history.
- Used two age-segmented models (25 and under, over 25) with matching scalers, a normalised medical-risk score and one-hot encoding, served through a Streamlit UI.

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, SQL
Frontend and Mobile: Flutter, React, HTML, CSS, Sass
Backend and Databases: Node.js, Express, FastAPI, REST APIs, JWT Authentication, MongoDB, SQL
AI/ML: Google Gemini API, LLM Integration, scikit-learn, XGBoost, Pandas, NumPy
Tools: Git, GitHub, Puppeteer, Streamlit, Vercel, Render

CERTIFICATIONS

Python: Beginner to Advanced for Data Professionals | Codebasics — Jan 2025
SQL for Data Science | Codebasics — Jul 2025
Master Machine Learning for Data Science | Codebasics — Jul 2025

EDUCATION

B.Tech in Computer Engineering | Lokmanya Tilak College of Engineering, Mumbai — Jun 2022 – Jun 2026
